LI LUDOVIC

CREATIVE TECHNOLOGY ENGINEERING STUDENT

COMPUTER VISION · ROBOTICS · HUMAN–COMPUTER INTERACTION
SEEKING A 6-MONTH INTERNSHIP IN AI, ROBOTICS OR INTERACTIVE SYSTEMS

ABOUT ME

Master's student in Creative Technology with hands-on experience in computer vision, interactive systems and rapid prototyping. Experienced in developing Python-based AI prototypes and integrating software with hardware using Unity, Arduino and ESP32. Seeking a 6-month internship in AI, robotics or human-computer interaction.

SKILLS

- Hardware & Prototyping: Arduino, ESP32-S3, electronics, rapid prototyping, 3D modeling
- Programming: Python, C++, C#, SQL, HTML
- Tools & Frameworks: Arduino IDE, Unity, MediaPipe, KiCad, SolidWorks, Fusion 360, Figma
  Soft skills: Teamwork, creativity, design thinking

EXPERIENCES, PROJECTS

Project TeruBot
Sep 2025 – Apr 2026

- Co-designed an interactive robot connected to a community app, where users share their daily emotions. These inputs are aggregated into a collective mood that is transmitted to the robot to influence its behavior.
- Developed the robot's eye animations in Python and contributed to the overall concept and interaction design.
- Co-author of TeruBot: Materializing Collective Emotions Through an Embodied Robotic Metaphor, published in theCHI2026 Extended Abstracts.

Computer Vision Intern – PQTEL
Apr 2026 – Aug 2026 / Changsha, China

- **Handwritten Digit Recognition:** Trained and evaluated CNN-based handwritten digit recognition models using Python and MNIST, including image preprocessing.
- **Multi-Digit Detection:** Adapted an existing TinySSD model for multi-digit detection using a custom annotated dataset and developed a camera-based detection prototype.
- **KeyMotion — Interactive Projected Piano:** Independently developed an interactive projected piano integrating MediaPipe hand tracking, Unity interactions, audio mapping and ESP32-S3 hardware.

Project BreathIN
Sep2026–Present

- Developed a partially functional Unity prototype in which a character moves forward through a virtual environment.
- Designed a breathing-guidance experience intended to help users follow a calming breathing rhythm by synchronizing their breathing with the character's movement.
- Planned future integration of microphone-based or EMG-based breathing input; these sensors have not yet been integrated.

Python Projects
Sep2026–Present

- **Weather Application:** Developed a Tkinter application displaying current temperature, five-day minimum and maximum temperatures, and sunrise and sunset times.
- **Film Rating and Recommendation Application:** Developed a film-rating, review and recommendation application using an SQL database and Swift. Implemented the main functionality and subsequently refined the user interface with AI-assisted tools.

EDUCATION

ESILV2022–2024/ EngineeringSchool/ ParisLaDéfense
- Integrated preparatory cycle
- Foundations in mathematics, physics, coding and engineering science

DORSET COLLEGE Jan 2025 – May 2025 / Dublin
- Semester abroad at Dorset College
- Courses taught in English: fluid mechanics, data statistics, data analysis, C++, database & interoperability, complex systems

ESILV 2025–2027 / Major in Creative Technology for IFT
- Hands-on learning, human-computer interaction, computer science, electronics and 3D modeling
- Quickstarter project: creation of a small product intended for launch on Kickstarter

LANGUAGES

- French (native)
- English (TOEFL C1)
- Spanish (A2)
- Chinese (A1)

INTERESTS

- Sports: football, swimming, running
- Music: 10 years of cello
- Cooking
- Travelling
